PENNSYLVANIA STATE MENTAL HOSPITALS: 1978

DOCUMENTS SECTION

The downward trend in the number of State mental hospital patients continued during the year as 11,079 patients were listed on the books on June 30, 1978. These 11,079 patients represent a decrease of 43,240 from the peak of 54,319 in 1966.

Of the 11,079 patients listed on the books on June 30, 1978, 10,824 were in residence and 255 were on leave of absence. Compared to June 30, 1977, there was a total decrease of 735 patients on books (Table 2).

Female patients continue to outnumber males. At the end of the fiscal year they again accounted for 52% of the resident patients, 45% of those on leave and 51% of all patients on books (Table 2).

Psychotic disorders (predominantly schizophrenic reactions) continued to be the prevailing diagnoses of resident patients, with 64% of the year-end residents suffering from such disorders. As in recent years, the majority (57%) of resident patients were afflicted with schizophrenic reactions (Table 3).

At the end of the fiscal year, the prevailing mental disorders of the resident population were similar to those at the beginning of the year, with schizophrenic reactions remaining at 57%. Patients suffering from manic depressive reactions and from other psychotic disorders remained at 6% and schizophrenic patients continued to account for much of the movement during the year; comprising 57% of all admissions, 66% of transfers in and 67% of transfers out among the hospitals and institutions in the State system. The percentage of alcoholics admitted during the fiscal year remained at 4%. Diseases of the senium continued to be the predominant mental disorder of deaths in hospitals at 32% (Table 4).

The percentage distribution of residents by age group varied slightly from the first to the last day of the fiscal year. As in the last five years, patients 45 years of age and older accounted for 75% of the resident population at the end of the year. On the other hand, patients under 45 years of age continued to account for half or more of the year's movement of residents except for deaths in the hospitals. There has been an increase in the deaths in hospitals of patients 65 years of age or older from 71% in 1974 to 72% in 1977 and now 71% in 1978 (Table 5).

The dominant mental disorder of resident patients in all age groups (except under 15 years) were psychotic disorders (predominantly schizophrenic reactions). Other frequent diagnoses were transient situational disturbances for those patients under 25 years of age and organic brain syndromes for patients 65 years of age and older. These trends are similar to recent years (see Table 6).

The time-on-books in the hospital since last admission was under three years for 30% of the year-end residents, 3 to 10 years for 17%, 10 to 20

PENNSYLVANIA STATE LIBRARY  
DOCUMENTS SECTION

years for 12% and 20 years or more for 41%. By age group, the largest percent of both male and female residents under 45 years of age had been on the books for 1 to 3 years, and each group 45 years of age and older for 20 years or longer. It is interesting to note that over half (53%) of all patients have been on the books for 10 or more years and that 41% have been on the books for 20 years or more. Of this latter group, nearly 81% were 55 years of age or older (Table 7).

For the state as a whole, there were 93 patients on books per 100,000 population as of June 30, 1978. The number per 100,000 by county of residence ranged from 17 for Fulton County to 186 for Sullivan County. As was to be expected, Philadelphia and Allegheny Counties had the largest number of patients, with 1,675 and 2,052 respectively (see Table 9). With respect to total admissions, there were 57 admissions per 100,000 population. The admissions per 100,000 by county (population) ranged from a low of 6 for Potter County (and only 8 from Fulton County) to 145 for Delaware County (the next highest being 111 from Somerset County) (Table 11).

Of the 6,780 admissions during the fiscal year, 2,662 were voluntary commitments (39%), 2,261 were court commitments (34%), and 1,850 were emergency commitments (27%). Unlike previous years, voluntary commitments were not the predominant type of commitment in a majority of hospitals (Table 12).

Most resident patients as of June 30, 1978 were on the books of the State hospital nearest their home counties, with the exception of Farview which, because of its specialized nature, drew patients from throughout the State (Table 16A).
